Energy Medicine: The New Frontier

May 29, 2025

Topic: How evaluating 9 foundational aspects of the body will help resolve any dysfunction or disease.

- Why ignoring the 9 basic tenets prevents conventional medicine from healing you.
- Why energy medicine testing is superior to conventional laboratory testing.
- Why medicine's gold standard of practice is an illusion.

With special guest expert

Patricia Sihlanick

When: May 29, 2025 07:00 PM Eastern Time (US and Canada)

Register in advance for this meeting:

[https://us06web.zoom.us/meeting/register/
pFQn_WJ9RH-152oc2OfGAQ](https://us06web.zoom.us/meeting/register/pFQn_WJ9RH-152oc2OfGAQ)

After registering, you will receive a confirmation email containing information about joining the meeting.

Energy Medicine's 9 Ultimate Body Tune-Ups

What if you could push a button and reset your entire body back to “factory default.” Through 50 plus years of research and intelligent evolution this is now a reality. The Ultimate Body Tune-Up addresses the nine major aspects of the body to reset it back to balance.

CyberScan System: This German computerized system is designed to evaluate one's body by taking a holographic energy reading from one's palm chakra and comparing it to a database of over 132,000 electromagnetic signatures to reveal potential initiators (heavy metals, pathogens, mental emotional issues, EMFs, chemical toxins, vaccines and their adjuvants, radioactive metals, etc.) that can be the source for triggering disease.

Cranium: The 22 major bones of the cranium are evaluated and realigned not just independently but in conjunction with the dental complex. Since the occlusion or bite is the self-correcting mechanism for rebalancing the cranium, spine, and pelvis it must be judiciously tuned to direct the right amount of forces to balance the skull bones when chewing or just swallowing. Cranial distortions will affect both the central and autonomic parts of the nervous system, which affect all the organs of the body. These cranial distortions can be the source for chronic migraine headaches, vertigo, fascial and muscle tension, hip, lower back, neck, knee, ankle, and foot pain. Cranial manipulation requires a highly specialized skill that unfortunately today very few practitioners worldwide possess.

Dental Complex: This often overlooked area is a major source for both structural body imbalances and source for toxicity. Malocclusions or even a minor bite discrepancy can be a major source for migraine headaches, facial paresthesia, atypical facial pain, trigeminal neuralgia, vertigo, neck, lower back, and pelvic pain. In addition, toxins from root canal teeth, periodontal or gum disease, toxic dental materials, residual jawbone infections from post extraction sites can contribute to causing pain, emphysema, Raynaud's disease, autoimmune diseases like Hashimoto's disease, Rheumatoid Arthritis, thyroiditis, cancer and many other maladies.

Feet Pronation: The feet and the maxillae represent the two main foundations of the human body and must be evaluated. A distortion in either one or both will cause all the structures in between to compensate. Pronated feet will torque or twist the pelvis, spine, shoulders, jaw, and cranium. By means of a simple test, a pronation can be diagnosed and if present corrected with a specially designed soft shoe insert to re-establish structural balance.

Body Frequencies: In 1992, Bruce Tainio developed a monitoring device that measured the normal frequency range of all the major organs. These frequency ranges have been replicated and imprinted into a Tesla Energy Card® to reset all the major organs at the beginning of each day. This is easily accomplished by either wearing the card for one to two hours or imprinting its frequencies into four ounces of water and drinking it. If the organs, tissues, and other living cells are vibrating within their normal frequency range then they will all function normally

and prevent disease from developing. This concept was documented in the 1970s by a Russian researcher, Vlail Kaznacheyev, who did 20,000 meticulous experiments that verified this theory.

Scalar Energy: By surrounding the body in a plasma field of scalar energy produced by the Theraphi System, one can initiate the repair process of the body's DNA, neutralize the full gamut of pathogens and toxins present, and stimulate the body's own stem cells for repair. Follow-up therapy is continued by wearing three custom imprinted jade rings, which imprint the healing frequencies into one's aura to maintain homeostasis and health. The positive effects of scalar energy was verified by Antoine Priori in the 1960s in France where he was curing almost 100% of all types of cancer.

Organic Nutrition: A combination of dehydrated organic and wild crafted nutrients and organic oils supply the fuel to detox and drive the system like a high performance race car. Only by ingesting raw, organic foods and supplements can the body repair and heal. A custom dietary regime will be established by evaluating each individual to determine which of the three metabolic dietary types are compatible with their energy pattern.

Ph and Oxygen Levels: If the body is too acidic, then the oxygen level is diminished, which sets the stage for degenerative diseases and cancer. In 1931, Dr. Otto Warburg won a Nobel Prize in Physiology for documenting that when the oxygen level dropped by 35% cancer develops. He also discovered that when the oxygen level was restored, the cancer disappeared. By

alkalizing the body with dietary choices, one's oxygen level will be increased. In addition, use of ozone via ear insufflation is a quick way of elevating one's oxygen level.

Brain Neurology: According to the ancient oriental healers, all diseases start in the brain. This concept was verified by Dr. Ryke Geerd Hamer the developer of New German Medicine. He observed that calcifications in specific areas of the brain were directly related to specific areas of cancer in the body. Regardless of the disease process practitioners have to not only treat the area of dysfunction but also reset the circuitry in the brain to stop the disease process and prevent it from reoccurring. By instituting specific Ngui Matrix Qigong Acupuncture points with a custom designed healing laser, the circuitry of specific areas of the brain and the six major areas of the brain can be quickly reset.

The concept of the **9 Ultimate Body Tune-Ups** was developed by Dr. Gerald H. Smith over a span of fifty plus years of clinical experience and extensive training in medicine, dentistry, chiropractic, osteopathic, physical therapy, nutrition, cranial manipulation, and acupuncture. This comprehensive approach has been clinically verified and resulted in resolving many medical maladies that conventional medicine said could not be cured. The following illnesses represent a partial list of the over 200 case studies (icnr.com/case-study-archive/) compiled by Dr. Smith showing positive resolution:

- **Migraine headaches (1, 28, 32, 54, 114, 192)**
- **Congestive heart failure (4, 17, 27)**
- **Chronic fatigue (11)**

- Bipolar Disorder (16)
- Rheumatoid Arthritis (23)
- Oral Shingles (34, 40, 116)
- Raynaud's Disease (36)
- Lower back pain (42, 52, 183)
- Liver transplant averted (60)
- Blindness reversed (61)
- High blood pressure resolved (66)
- Bell's Palsy (71, 187)
- Vertigo (75, 84, 159)
- Severe Eczema (77, 82, 106)
- Uterine cancer (77)
- Lung cancer (87, 199)
- Pain and paraesthesia (85)
- Post-concussion headaches (89, 91, 92, 134, 185, 190, 191)
- Unrelenting Sciatic pain (93)
- Hashimoto's disease (94, 95)
- Child's seizures resolved (108)
- Hearing loss restored (109)
- Alzheimer's and Dementia (115)
- Parkinson's (131)
- Power of Cranial adjustment (135, 136)
- Cardiac Sarcoidosis: Mayo Clinic stated there is no cure (139)
- IBS, IBD, Crohn's (167)
- Brain cancer - Glioblastoma (203)

Why ignoring the 9 basic tenets prevents conventional medicine from healing you.

The answer is simple. Almost 100% of what conventional medicine is treating are symptoms. Examples: High cholesterol, Heart attack, cancer, autoimmune disease, high blood pressure, etc. Conventional

medicine practitioners are not trained to diagnose the root cause of your problem.

Why energy medicine testing is superior to conventional laboratory testing.

Conventional medicine's testing only reveals how the body is reacting to the root cause of your problem. Example: One of my patients had a swollen liver for 27 years. His alkaline phosphatase level was elevated for 27 years. An elevated reading does not reveal the root cause. Energy testing diagnosed benzene and hepatitis B trapped in his liver. In seven months, removing the two "splinters" resulted in his alkaline phosphatase level going back to normal. We avoided an liver transplant.

Another example: My recent brain cancer patient, who was a medical surgeon, had every test imaginable. None revealed the underlying cause. His colleagues initially employed chemotherapy and radiation to "kill" the cancer. This is a Neanderthal approach and putting forth the big lie that cancer is the villain. Energy medicine diagnosed mercury and glyphosate in the area of the tumor. Approximately a year following natural treatment, his cancer was gone.

Why medicine's gold standard of practice is an illusion.

The public has been feed a barrage of propaganda that conventional medicine is the gold standard. That treating the symptom is good medicine, which totally ignores ever looking for the real cause. The German Minister of Propaganda, Joseph Goebbels, was quoted as saying, "If you tell a big enough lie long enough, people will believe it." Unfortunately the American people have been lied to for 115 years since John D. Rockefeller and Andrew Carnegie hijacked the medial industry in 1910.
